standout Explorations in laser cutting yielded imaginative results

With positive-and-negative rows of geometric shapes in bold colors, these panels look exceptionally playful. But they are serious business: At the Easthampton, Massachusetts, factory of this second-generation, family-owned company, a large-bed industrial metal-cutting fiber laser crafts the solid aluminum sheets. The standard 4-by-8-foot panels can cover walls—or become them. The eight patterns, including rows of ovals and diamonds, come in seven powder-coats, including brick, tangerine, and sea foam; layer them slightly out of alignment to achieve concentric levels of tone and form. No matter the option, the customizable sheets are ideal for vertical and light-duty horizontal use in hospitality, retail, and corporate spaces. chemetal.com ➤

"We matched design irreverence and joy with easily repurposed solid aluminum panels to create a functional multiuse product for interior spaces everywhere"
